

INSECTICIDES

NEW SPRAY MASTER®

**Aerosol insecticide
for civil and domestic use**

TARGET:

- **FLYING INSECTS**
- **CRAWLING INSECTS**

Registration to the Italian Ministry of Health N. 19444

Composition	
Chrysanthemum cinerariaefolium 50% (Pyrethrum Extract)	0,10 %
Permethrina	0,22 %
Piperonil Butossido	0,80 %

CHARACTERISTICS

The New Spraymaster is an aerosol insecticide based on Pyrethrum Extract, Permethrin and Piperonyl Butoxide. The product has a high knockdown and residual effect.

New Spraymaster is effective against both crawling and flying insects, particularly against cockroaches, ants, fleas, bedbugs, mites, flies, mosquitoes and tiger mosquitoes, etc.

Its action is immediate and it can be used both in civil and public areas (hotels, schools, meeting points, cinemas, canteens, hospitals) and in domestic areas (kitchens, cellars, basements, bedrooms, gardens ecc).

The formulation of New Spraymaster is total harmless towards adults, children and domestic animals.

USE

Against crawling insects: shake the product before use and sprinkle it on floors, surfaces, corners, wall cracks, and on all the places where pests such as cockroaches, ants, fleas and bugs can find shelter. Keep the aerosol can at a distance of 20 – 30 cm from the area to be treated.

Against flying insects: close the doors and windows and sprinkle upwards. For small and middle sized rooms do not erogate for more than 4 – 5 seconds and then let the product react for approximately 30 minutes, then carefully ventilate the area. Repeat the treatment only if needed and direct the spray jet away from persons or animals. In order to obtain a persistent effect, sprinkle the product also onto rolling shutters, blinds, windowsills, light fixtures and ceilings.

Against mites: sprinkle the product once per week on those surfaces where dust easily sediments: carpets, moquette, sofas, coaches, armchairs, pillows, tents, ecc. The product has been tested on dust mites proving a high knock-down and residual effect. To maximise the effect of New Spraymaster it is recommended, after the treatment, to clean all the surfaces with a vacuum cleaner that has been previously sprayed with the product.

PRECAUTIONS FOR USE

does not contain harmful propellents. Carefully follow the instructions listed on the label.

WARNINGS: read the label before use

Technical data	
Target	flying and crawling insects
formulation	aerosol insecticide ready-to-use
Packaging	12 pcs of 500 ml
Code	056
